

GLAUCOMA DIAGNOSTICS
SKILLS TRANSFER WORKSHOP

Cipla Partnership in practice

Cipla has always been at the forefront in updating knowledge and providing practice support to doctors. Through a variety of scientific initiatives, we endeavor that the latest developments in medicine reach caregivers.

Our wide range of resources like CMEs, international symposiums, webcasts, cross talks, workshops and in-house publication, are tailored to suit individual needs.

Cipla has played a vital role in terms of dissemination of information which aided diagnosis and management across more than 65 therapeutic categories i.e. Asthma, COPD, Hypertension, HIV/AIDS, Hepatology, Urology, Neonatology, Cancer, Ophthalmology etc.

Glaucoma is another such disease, which often requires specialised skills in diagnosis. It has been noted that as a disease glaucoma is either underdiagnosed or overdiagnosed.

Glaucoma is a disease which has to be defined, staged, and longitudinally assessed and treated based upon the structural appearance of the optic nerve and its function.

Careful and accurate measurement of intraocular pressure, classification of type of glaucoma based on gonioscopy and optic nerve head examination becomes an indispensable trait for diagnosis and disease management.

We, at Cipla Foresight, appreciate this fact and take pleasure in introducing to you a program called Drishti. Drishti is a hands-on workshop on Gonioscopy, Perimetry, Pachymetry, Disc Evaluation and Imaging Techniques.
